

White, 1669.

A New

ALMANACK

For the year of our Lord God,
1669.

Being the year from the worlds
Creation, 5632.

And the first from Bissextile, or Leap-year.
Calculated and properly referred
to the Meridian of *Todington* in *Bedford-*
shire, where the north pole is elevated
above the horizon 52. degrees and 8 mi-
nutes, so that it may serve for all parts
of *England*, without any sensible error.

By William White

*Laude eum Sol & Luna, Laudate eum omnes
Stella lucis, Psalm 148. 3.*

Of Rain.

Rain is a cold vapour, an earthy humour, or fumosities out of water or earth, drawn up by the vertue of the Sun, to the neather part of the middle space of the ayr, there through Cold thickned, then dissolved, thus engendred, falleth on the earth.

Of Snow.

It is a moist vapour, drawn up to the middle region of the ayr, then thickned, and frozen in the body of a cloud: so congelated, descendeth.

Of Hail.

A Cloud resolved into water, in the fall congelated, maketh hail, the higher it cometh from above, and the longer it carrieth in the ayr, the rounder hail.

Of Thunders and Lightnings.

Thunder is the quenching of fire in a cloud. Or thunder is an exhalation, hot and dry mixt with moisture, Carried up to the middle region, there thickned and wrapped into a cloud: of this hot matter coupled with moistnes, closed in the cloud, groweth a strife, the heat bearing out the sides of the cloud with a thundring noise: the fire then disperfed is the lightning. *Aristotle* affirmeth the lightning after the thunder, but the fire doth first appear, in that the sight is before the hearing.

January hath xxxj. dayes.

The old year's past, the new doth now begin,
Put off the old man, abandon deadly sin:
Such as determine in their sins to dwell,
There is no hope but they run post to hell.

February hath xxviij. dayes.

Be quiet and sober, and good dyet use,
The help of good Physick do not refuse :
The spring coming on thy blood doth increase,
Of sin purge thy soul, with God make thy peace.

Hot Spice is naught, strong Wines inflame,
Sweet meats are worse, much sleep the same :
But sinful ryot worst of all is deem'd,
Lose not thy soul which Christ hath now redeem'd.

August hath xxxj. dayes.

Now gather thy fruits, God send thee good store,
Remember to give some part to the poor :
Lend them that want, the Almighty favoureth such,
And in short time repayes them twice as much.

A Table to know
when the Moon
will be South
for every day
in the year.

The Use of the Table.

The age of the moon being found in the *Kalender* (that is) how many dayes is past from the time of her change; Therewith enter this table, & having found it in the first column to the left hand, if it be before the full moon; or to the right hand, if it be after the full moon: you shall have in the middle column, her coming to the South, before or after, as is noted in the foot of the Table.

days.	Hour.	Minu:	Day.
1	12	46	16
2	1	36	17

12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

From the change to the full, the Moon comes to the South, after-noon.
From the full to the change, the moon comes to the South before-noon.

From the change to the full, the Moon comes to the South, after-noon.
From the full to the change, the moon comes to the South before-noon.

As for Example:

The 21. day of February, the Moon is 6 days old, wherewith entering the table in the first co-

lumn to the left hand, right over against it towards the right hand, I find 4. and 48. shewing me her coming to South to be at 4. a clock, and 48 min: after-noon. And when it was 5. days old, as it was the day before, being the first day of February, her coming to the South was just at 4. a clock after-noon.

The Explanation & Use of the former Map & Table

First for the **Map**: The figures in each shire of the map are to shew you the names of every County, & the Letters in the same are for such uses, as I will shew hereunder. You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the black speck, or spot therein signifieth London. Now if you would readily find the name of any shire therein, and how many miles the middle of the said County (in a straight line) is from London, & what point of the Compass it is from the said City; resort then to the Table of shires on the other side, and it will resolve you.

As for example, Berkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; where is shewed that the middle or heart of that shire is 40 miles from London in a straight line, & it lyeth full west from the City, and looketh for ward toward the right-hand, it sheweth it hath no City, 11 Market-Towns, 2 Castles, 149 Parishes, 3 Rivers, & 3 Parks. Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 miles, & lyeth North-west & by west from the said City, it hath no City, 11 Market-Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks, and so of the rest.

The use of the Letters in the Map is this, S for Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point, H Holy-head, the * the Irish Sea, B the British or English Sea, G the German Sea, Ba Barwick, D Dover, N Newcastle, C the point of the Compass, S the Scale of Miles, by which you may measure the distance of any place, for every black degree is five miles, so is every white.

The 39 shires from Berkshire to Yorkshire are the English shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be something further in Miles to the middle of each shire, by reason of the crookedness of the Highways, Hills, and vallies, but what is here set down is meant in a straight line from London, as is said.

A Prognostication.

Rules of Mensuration

Fingers breadth is four barley cornes in thicknes; and an **Inch** three Barley cornes in length: **Hands breadth** four fingers: A **span** is three hands breadth: A **foot** is four hands breadth: A **Geometrical Pace** is five foot: an **English Pearch** is foot $\frac{1}{2}$: A **furlong** is a hundred and twenty five paces, or six hundred twenty and five foot: An **English Furlong** is six hundred and threescore foot, or a hundred thirty two paces: A **League** is thousand and five hundred paces: An **Italian Mile** is a thousand paces, or eight furlongs: A **Common German Mile** is thirty two furlongs: An **English Mile** is eight furlongs. An **Acre** is six Pearches in length, and four in breadth.

How to judge what Weather will follow, by the rising and setting of the Sunne.

The Sun rising bright & clear, signifieth a pleasant day: If he rise fiery red, it promiseth rain: If at his rising he be thinly overcast with a cloud, it betokeneth foul weather: If the sun drive the clouds before him to the West, it signifieth fair weather: If at his rising there appear a circle about him, & banish away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or clouds like water, it threatens rain. If at the rising of the Sun, his beams be red, or long, or encompassed with red clouds, it signifieth great winds: If at his rising there appear much mist, or if it raineth in the evening, it threateth foul weather to follow. Also if the Sun beams spotted either green, pale, or black, or gathered to a cloud, it signifieth rain. **The Sun** setting clear without any cloud, signifieth a fair night to ensue. If the circle

circle, or circles about the Sun be clear, & of no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more vehement winds. If the circles are here, & the broken, & are thick & black, look for cold wind or storm: or if he settle behind a great black cloud, rain follows.

How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or dayes before her full, or in the midst of the quarter be found of pure light, nothing compassing her, she ends direct up, she promisseth faire weather: but if she be to red colour, she sheweth winds. The Moon pale, somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the tips of her horns: if they be blunt, it signifieth rain: if sharp-pointed & pricking upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, they tokeneth great windes and moisture in that part where they seem to; and in winter, great frost. When dim Stars appear with long fiery rayes, they threatneth winds, and great drought: the more number, the greater shall be the effect. If a Star seems to shoot or fall, it signifieth great winds in that place: If they seem to shoot in diverse places, it signifieth divers windes: If in all places windes, the most tempestuous, and most tempestuous weather.

How to judge of the weather by the Clouds.

Black clouds flying from the east, signifieth rain at night: If from the south, rain the next day: if they are low, and appear to settle upon the tops of hills, it is a signe of cold weather, if they

be full charged, and appear white like towers, hail is
at hand: if white clouds appear in winter, two or
three days together at sun rising, it is a sign of cold
and snow; but black clouds signify rain. A red sky
in the evening, and a gray morning is a sign of a fair
day. Mist falling in the morning, in spring or har-
vest, also mists over ponds or waters in the morning
signify rain. If the clouds fly swiftly in the ayre, it sig-
nifies rain from that part of the heavens, especially
from the north or south. If thick white clouds ga-
thered together in many places like flocks, or heaps
of wool, appear in many places, it is a sign of rain:
but if thick dark clouds towards the north or west
near the earth presently rain, and if the hills a little
above the earth, foul weather is over. If mists de-
scend from the hills, and settle in the valleys, it is a
sign of fair hot weather next day, or if white mists
rise from the waters in the evening.

How to judge of the weather by the Rain-bow.
The natural signification of the Rain-bow, is to
show rain either past or to come. The Rain-bow
appearing when it is fair, is a sign of foul weather,
when it is foul if it appear, it is a sign of fair weather;
the greater it appears, the more rain, the redder the
more wind, if before noon then the rain is spent; if
the rain-bow appear about one or two in the after-
noon then rain is near. A rainbow in the morning
is a sign of wet (unless there be brought in the air):
if it appear in the evening it is a sign of fair weather
(unless the air abound with moisture.) A rain-bow
in the night opposite to the moon, is a sign of much small
rain and wind to follow. A rain-bow after long rain
is a sign of fair weather presently; if two rain-bows
appear together, it is a sign of rain within one or two
days after.

The proportion of the pound Avoir-du-pois to the pound Troy, is as 60 to 73, so that 60 pounds Avoir-du-pois are equal to 73 pound Troy. The proportion of the ounce Troy to the ounce Avoir-du-pois, is as 73 to 80 so that 73 ounces Troy, are equal to 80 ounces Avoir-du-pois. Therefore the pound Avoir-du-pois is greater then the pound Troy; and the ounce Troy is greater then the ounce Avoir-du-pois.

For wheat at 5 shillings the Bushell or Stryke, the Town-Bakers penny white, is (by Troy) 7 ounces 7 penny weight: by Avoir-du-pois 8 ounces: And the Country-Bakers penny white (by Troy) 7 ounces 13 penny weight: by Avoir-du-pois 8 ounces and one quarter. If the Baker want one ounce in 36 ounces of this Assize, he shall suffer the Pillorie: without any fine or admonition, 51 Hen. 3.

White. 1669.

To find the time of the Sun-rising, or
setting, and consequently the length
of the Day and Night throughout the whole
YEAR.

For the ready finding of the Sun's rising and setting, I have added the subsequent Table, the use whereof is thus: In the head of this Table (consisting of fourteen columns) are placed the names of the twelve Months viz. January, February, &c. July, August, &c. and in the first & eighth Column thereof, are placed the daies of the Month, from 1. to . . . Moreover, in the head of the Table, under the names of the Months, is *Ris. S. Set.* which signifieth Sun-rising, and Sun-setting; and below that is *H. M. H.* which signifieth, Hours, Minutes, Hours.

For example.

I would know the Sun-rising and setting January 10. first, I find January in the head of the Table, and in the first Column on the left hand I find the tenth day, and right against the tenth day under January I find 7 50. 5. which shews me, that the Sun riseth at seven a clock, and fifty minutes past in the Morning and setteth at fifty minutes before five at night; and so for the rest.

Now if you would know the length of the day and night, do but double the hour and minute of the Sun's setting, and the sum is the length of the day; and if you double the hours and minutes of Sun-rising, you shall have the hour of the night.

Example.

The tenth day of January I would know the length of the day and night: I find (by the precedent directions) the Sun riseth at 7. hours 50. min. which doubled is 15. hours 40. min. for the length of the night: and 4. hours 10. min. the Sun-setting being doubled, makes 8. hours 20. min. for the length of that day.
